PRODUCT DATASHEET

EXPOSING MERAKI DATA

The business challenge

Increasingly, Meraki network owners need to make smarter and faster data-driven decisions. But how can you view your Meraki data in the most meaningful way, searching and retrieving critical information across your entire infrastructure? You need quick access to data insights and status updates so you can confidently make the decisions that will improve business outcomes. Most large organisations try to get at their valuable data using Python scripts which have the paging and rate limiting issues of using the Meraki API. But there is a better way.

Staying ahead of potential issues

You don't have to interact with the Meraki API any more, you're just in familiar SQL query territory. Filter and query on the built-in DataMart with its wealth of operational and historical data classes. Travel a device's entire configuration history by dragging a bar across a timeline. Tracking and reviewing adjustments are easy so you stay ahead of potential issues and maintain a secure and efficient network.
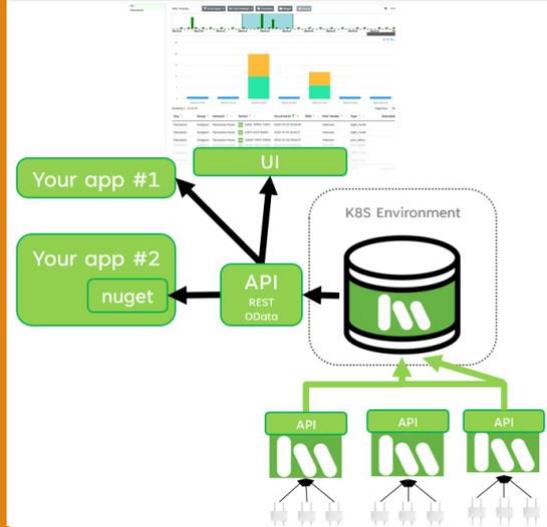

Introducing Meraki DataMagic

Meraki DataMagic provides an intuitive interface where you can:

- Access the data locked behind your SaaS APIs, extracting it quickly and easily
- Perform powerful SQL queries against thousands of entries in seconds, so you can make data driven decisions faster
- Store all the data from all your networks but with RBAC for data granularity, so teams can focus on what matters most to them
- Delve into networks, devices, and API-reported details including immediate access to API dashboards and associated floor plans

Use Cases

- Quickly identify and replace unsupported devices or with security vulnerabilities
- See everything claimed into your organisations but not deployed to a network Get access to MAC addresses, even when obfuscated, for useful information on dwell time, failures and more

UNSURE HOW TO ACCESS YOUR DATA?

Query and view all the metrics and events in your infrastructure in an intuitive way, with a dynamic tree view showing an organized and comprehensive representation of your estate.

DON'T WANT THE RISK?

We safeguard your data within our highly secure facility.

We support all current Meraki devices including MT Sensor allowing environmental monitoring, power consumption, humidity and more, and guarantee support for all future Meraki devices

Pricing is free for those needing less than 100 devices, then per device.
